The logo for Anadolu Vacuum Technologies features a dark blue stylized factory icon to the left of the word "Anadolu" in a large, bold, dark blue sans-serif font. Below "Anadolu", the words "VACUUM TECHNOLOGIES" are written in a smaller, dark blue, all-caps sans-serif font.

Anadolu

VACUUM TECHNOLOGIES

Our customers are our business partners. By working with them to create value and mutual benefits, we aim to become a leader in the vacuum and fitting components sector.

We are looking forward to starting our partnership through this Anadolu Vacuum product catalog.

Future of Vacuum Components

Let's grow together!

Anadolu Vacuum continues to grow with its 50 employees, 1600 m² work space, CNC lathe, CNC milling machines and up-to-date technologies, international collaborations and strong references.

Who We Are

Anadolu Vacuum products are created with 50 years of craftsmanship, experience in the trade, machining experience, family tradition and artisanship. This special collection of products has been developed and tested since 2009.

Anadolu Vacuum meets customer needs with modern production techniques, quality and product improvement practices. By meeting engineering and quality material needs, and customer requests in an economical way that is also in conformity with international quality standards, we aim to provide our valuable customers with solutions in the vacuum and semiconductor industries. The products you will see in these pages have been developed with the aim of providing cost effective, highly durable, easy to use quality materials and good customer service/customer support. Which has been established after extensively researching internationally sold products.

In additions to its products, Anadolu Vacuum is also a practical, fast and reliable solution partner that meets its customers expectations by finding solutions tailored to its customers specific requests, by being able to work on an order-based manner and by answering its customers needs and requests as quickly as possible.

What We Do

We are thrilled to introduce you to Anadolu Vacuum, a company that constantly improves itself through customer surveys, international collaborations, ever-improving production experience, high quality production lines, highly trained professionals and impeccable customer service principles. We design products for vacuum and semiconductor industry. Anadolu Vacuum products are special selection of 304 or 316 Stainless Steel and Aluminium EN AW 6082 vacuum and fitting components flanges, seals, O-rings and clamps. Our vacuum and fitting components can be customized for your specific needs.

Get maximum efficiency!

We guarantee you that you will get maximum efficiency when original Anadolu Vacuum products are used with the correct assembly.

FUTURE OF VACUUM COMPONENTS

ISO-KF

ISO-K/ISO-F

CF

Our Systems

ISO-KF

The Small flange or KF standard (DIN 28403, ISO 2861) is the standard connection for vacuum pipes up to the nominal diameter of DN50 used in low and high vacuum. KF flanges utilize an Aluminium clamp with a single wing nut allowing frequent assembly and disassembly without the need for any tools. Trapped centering rings and NW clamps or clamp chains are offered for special applications.

ISO-K/ISO-F

ISO KF vacuum systems employ components with metric interface dimensions which have been defined by the International Standards Organisation (ISO 1609). This ensures a high degree of compatibility between components obtained from different sources.

The bolt type flanges are assembled by using a set of bolts to fix the position of the mating flanges, whereas the claw clamp flanges use double claw clamps to hold two flanges together. In addition, the use of the claw clamps means that mating flanges can be connected together in any orientation. A wide range of adaptors for connection to CF or KF flanges can be found in the adaptor section.

CF

The generation of ultra high vacuum (UHV) makes great demands on the material and connections. Therefore the CF standard was created in the UHV technology (ISO 3669). CF components compress a copper gasket between two stainless steel flanges to create a vacuum tight seal in ultra high vacuum. The CF flange system is more commonly used within the vacuum industry and as such has a much larger standard product offering. For transition from UHV to HV, Anadolu Vacuum also offers a complete range of adaptors for CF flange to KF or ISO flange. Please refer to the adaptor section.

Future of Vacuum Components

Anadolu Vacuum products are created with 50 years of craftsmanship, experience in the trade, machining experience, family tradition and artisanship. This special collection of products has been developed and tested since 2009.

Let's grow together!

Anadolu Vacuum continues to grow with its 50 employees, 1600 m2 work space, CNC lathe, CNC milling machines and up-to-date technologies, international collaborations and strong references.

WHY Anadolu Vacuum?

- Highest quality and durability
- Most economical! Highest benefit-cost ratio in the market
- Ability to produce for all needs and in any amount
- Tested and approved products
- High reliability
- Long product life
- Fastest production and delivery at all times
- Highly trained and solution-focused personnel
- Constant after-sales customer support
- Unconditional warranty policies for all products

ISO-KF SYSTEM

ISO-KF vacuum components are directly compatible with all ISO-KF, NW or QF vacuum flange hardware connections.

The standard sizes offered are NW10, NW16, NW20, NW25, NW32, NW40 and NW 50.

Most components are offered in stainless steel. However, for adapters vacuum grade aluminium alloys are sometimes preferred. The standard KF vacuum component is generally used to connect vacuum instruments and can be found on vacuum coating systems, electron microscopes, vacuum ovens, vacuum pumps, vacuum equipment, vacuum gauges etc.

Major Dimensions of ISO-KF Components

Size (DN)	KF10	KF16	KF20	KF25	KF32	KF40	KF50
Outside Dimension A (mm)	30	30	40	40	55	55	75
Outside Dimension A (inch)	1,18	1,18	1,57	1,57	2,17	2,17	2,95
Centering ring nose B (mm)	12,2	17,2	22,2	26,2	34,2	41,2	52,2
Typical inside dimension C (mm)	10	16	20	24	34	40,5	50
Typical outside dimension D (mm)	14	20	25	28	38	44,5	57
Dimension E (mm)	3	3	3	3	3	3	3

Please consider the following in planning and designing your vacuum system:

-The pressures indicated below in connection with the product descriptions are absolute pressures, at an ambient pressure of 1000 mbar.

-The minimum achievable ultimate pressure in the entire system will depend upon numerous factors, especially upon the pump system, the desorption rates of the interior surfaces and the pump-down time. The minimum pressures indicated in connection with the product descriptions are based upon experience, showing what can be achieved in a well designed vacuum system. They could be higher or lower in individual cases. If elastomer seals are being employed, it will be necessary to take their gas permeability (permeation) into consideration. It will be a function of the material, temperature and type of gas in question. You will find typical ultimate pressures for elastomers in the chapter entitled "Materials."

-The highest and lowest permissible temperatures in the entire system will be governed by the lowest high temperature and highest low temperature of the components involved.

-The flange connections and components have been developed in order to achieve vacuum-tight connections. They can only assume mechanical loads to a limited extent. In designing a vacuum system, it will therefore be necessary to review whether it will be necessary for static or dynamic loads to be assumed by additional elements, e.g. holders.

Materials

Properties of Elastomer Materials

Designation	Base Elastomer	Customary Trade Name	Temperature Range [°C]	Properties ^{*3 *4}
FKM, FPM	Fluoro rubber	Viton®	-15 to 200	> Extremely resistant to petroleum-based oils, aliphatic and aromatic hydrocarbons as well as chlorinated hydrocarbons, concentrated and diluted acids and weak bases > Outstanding temperature resistance > High mechanical values > Superb aging resistance > Typically achievable ultimate pressure: 10⁻⁷ mbar
NBR	Acrylonitrile butadiene rubber, nitrile rubber	Perbunan®	-25 to 120	> Resistant to petroleum-based oils, hydraulic oils, lubricants, gasoline as well as other aliphatic hydrocarbons, diluted acids and bases > High wear resistance and stability > Very good helium-tightness > Typically achievable ultimate pressure: 10⁻⁶ mbar
EPDM	Ethylene propylene rubber	Dutral®	-50 to 130	> High resistance to hot water and steam > Very good resistance to aging and ozone > Good temperature stability > Very good resistance to oxidizing agents > No resistance to aliphatic and aromatic hydrocarbons and petroleum products > Typically achievable ultimate pressure: 10⁻⁶ mbar
VMQ	Silicon rubber	Silopren® Silikon	-55 to 200	> Superb temperature resistance, however not in the case of hot water or steam > Typically achievable ultimate pressure: 10⁻⁵ mbar
CR	Chloroprene Rubber	Neopren®	-40°C up to +100°C	> Low friction and low 'stick-slip' effect > Far better elasticity than solid PTFE > Common within pharmaceutical and processing industries

**3 Information relating to resistance should be used only as a guideline, as it is provided solely for the purpose of general information. Although this information is intended to simplify selection of the elastomer, it can by no means be deemed to represent a warranty, as it cannot readily be applied to real-world operating conditions. Service life might have to be determined on the basis of trial and error.*

**4 The indicated ultimate pressures are based upon experience showing what can be achieved in a well designed vacuum system. They could be higher or lower in individual cases.*

Materials

Metallic seals

Metallic seals require high contact pressures. They are plastically deformed when assembled and can therefore be used only once. Their hardness has to be lower than that of the flanges, thus allowing them to adapt to the microstructure and produce a metallic ultra high vacuum-tight connection.

Aluminium

Aluminium seals with Aluminium edged seal rings are employed for ISO-KF and ISO-K flanges. What are used are soft-annealable Aluminium-silicon alloys that require a contact pressure of around 100 N/mm². The differing thermal expansion will limit the maximum permissible working temperature in connection with the combination of Aluminium seal and stainless steel flanges to around 150°C. Following exposure to excess temperatures, the sealing effect will often deteriorate after cool-down.

Copper

Copper has around the same thermal expansion as austenitic stainless steel. Copper seals are used as gaskets (CF flanges) or wire seals (COF flanges). The copper must be of low-oxygen design, i.e. OF (Oxygen Free) or OFHC (Oxygen Free High Conductivity) must be employed. The presence of oxygen will lead to what is called “hydrogen disease”; i.e. when heat treated, the hydrogen will react with oxygen and the water that is thus produced will burst the structure.

Copper seals require a contact pressure of at least 200 N/mm². Their maximum permissible working temperature in air is 200°C; silver coating increases this to a maximum of 450°C. Soft-annealed copper seals require less contact pressure. They should be used in connection with viewports, in particular, in order to keep assembly related stresses as low as possible.

Materials

Description of individual high-grade steel types

1.4301 (304):

Suitable for vacuum applications. Austenitic stainless steel. Very high cold formability. Easily weldable. High corrosion resistance.

1.4305 (303):

Lower corrosion resistance than 1.4301. Easy to machine. Not weldable.

1.4306 1.4307 (304L):

Suitable for vacuum applications. Low-carbon variant of 1.4301 with similar properties. Easily weldable.

1.4401 (316):

Suitable for vacuum applications. Very high cold formability. Easily weldable. Due to molybdenum additive, more resistant than 1.4301 to non-oxidising acids and chlorine substance.

1.4404 (316L):

Suitable for vacuum applications. Significantly less carbon than 1.4401 but with similar properties. Easily weldable.

1.4429 (304LN):

Suitable for vacuum applications. Higher strength than 1.4435.

1.4435 (316L Mo):

Suitable for vacuum applications. Similar properties to 1.4404. The increased content of molybdenum makes 1.4435 more resistant to non-oxidising acids.

1.4541 (321):

Suitable for vacuum applications. Similar properties to 1.4301 but not polishable. Titan-stabilised, which makes it highly weldable in all dimensions without being susceptible to intergranular corrosion.

1.4571 (316Ti):

Suitable for vacuum applications. Similar properties to 1.4401. Titan-stabilised, which makes it highly weldable in all dimensions without being susceptible to intergranular corrosion.

1.4429 (316LN-ESR):

Suitable for vacuum applications. Very high homogeneity including purity combined with a high hardness level. Very low magnetic permeability. Other properties correspond to 1.4429.

Sealing materials

Elastomer seals are permeable to gas and also emit gases. The gas permeability, or permeation, depends on the material, the type of gas and ambient conditions – mainly the temperature. After an adequate evacuation time, the outward gas stream decreases considerably, which means that a relatively constant permeation gas stream materialises.

Storage conditions of elastomer seals:

To ensure that their properties are retained as long as possible, we recommend the following ambient conditions during storage:

- an area with little temperature variation
- an area where the temperature is between 10-25 °C
- O-rings should be stored in lightproof boxes

Metal seals made of aluminium:

High purity, which in turn allows to be used combination with Aluminium as well as stainless steel flanges. Temperature range: -196 °C to 150 °C. One time use only.

ISO-KF Components & Connection Types

KF components are used in low, medium and high vacuum systems. KF flanges are a sexless design, made from stainless steel or Aluminium. The seal is a elastomeric O-ring placed in a centering ring (inner centered), which aligns the flanges and holds the O-ring in position. These components are manufactured at Anadolu Vacuum in accordance with DIN 28403 and ISO 2861 in sizes NW10 to NW50 and are compatible with components from other well-known brand. The name KF (for Klein Flansche) was acknowledged by ISO, DIN, and Pneurop standards organizations. It is also called QF, NW and occasionally DN.

Each flange has a chamfered back-surface and is compatible by a circumferential clamp tightened by wing-nut, thumbscrew, bolt, or over-center lever (Fig. 1). All welded parts have been leak-tested using helium and are leak-proof up to 10^{-9} mbarl/s. The KF connection include on two symmetric flanges with a centering ring (inner centered), with O-ring seal and a clamping ring (Fig. 1). The essential contact pressure for the seal is composed via the conical fixing surfaces at the KF flange and clamping ring. Besides collar half shells can be used rather than a clamping ring. For the montage of KF components on base plates, claws are used (Fig. 2).

KF components are appropriate for a pressure of 2.5 bar (1.5 bar abundant pressure) and pressure of up to 10^{-9} mbar. At a max. pressure of up to 4 bar (3 bar abundant pressure), an outer ring in together with a clamping ring must be set upped.

Please consider the product information given on the product pages.

(Fig. 1)

ISO-KF Seal Inner Centered with Mesh Screen

- Various types of O-ring seals are available.
- Filter Material: Stainless Steel
- Wire thickness: Approximately 0.3 mm
- Mesh: Approximately 1 mm
- Consider O-ring temperature ranges (See Properties of Elastomer Materials Table on Page 14)

Dimensions

Stainless Steel 304/1.4301

- Temperature range: -196 to 300 °C

ISO-KF Clamps

This part consists of KF Clamps.
Check out this section for products NW10-NW50.

ISO-KF Wingnut CNC Machined Clamp

- Nominal diameters 10 to 50 mm
 - For High Vacuum (HV) Applications
 - For inner and outer center rings
 - Hinged, two-part device
 - Cnc machined clamp
 - For extra rigid strength and durable
 - Quick assembly and removal.
 - Stainless steel bolt and wingnut
- Pressure Range Elastomer seal: 10^{-7} mbar to 1.5 bar

Dimensions

Aluminium EN AW-6082/T-6 (Uncoated - For general use)

- Temperature Range: -196 to 150 °C

Size (DN)	A (mm)	B (mm)	C (mm)	Order No
10/16	65	45	17,5	VA.03.01.01.010.001
20/25	75	55	17,5	VA.03.01.01.010.002

50	115	95	22	VA.03.01.01.010.004

Natural Anodized

- For frequently opened and closed connections
- Low surface friction
- High corrosion resistance
- High wear resistance
- Dielectric property

Size (DN)	A (mm)	B (mm)	C (mm)	Order No
10/16	65	45	17,5	VA.03.01.01.010.005
20/25	75	55	17,5	VA.03.01.01.010.006

50	115	95	22	VA.03.01.01.010.008

PTFE Plated

- Used with aluminium KF vacuum equipment
- Low surface friction
- High corrosion resistance
- Non stick
- Advanced release feature
- High resistance to chemicals
- Dielectric property

Size (DN)	A (mm)	B (mm)	C (mm)	Order No
10/16	65	45	17,5	VA.03.01.01.010.009
20/25	75	55	17,5	VA.03.01.01.010.010

ISO-KF Wingnut Casting AL Clamp

- For High Vacuum (HV) Applications
- For inner and outer center rings
- Die casting aluminium clamp
- Hinged, two-part device
- Quick assembly and removal
- Stainless steel bolt and wingnut
- Temperature Range Aluminium: -196 to 150 °C
- Pressure Range Elastomer seal: 10^{-7} mbar to 1.5 bar

Dimensions

Uncoated

Aluminium EN AC-47100

Size (DN)	A (mm)	B (mm)	C (mm)	Order No

ISO-KF Wingnut Casting SS Clamp

- For High Vacuum (HV) Applications
- For inner and outer center rings
- Die casting stainless steel clamp
- Hinged, two-part device
- Quick assembly and removal
- Stainless steel bolt and wing nut
- Material

Stainless Steel (AISI 304/1.4301, AISI 316L/1.4404)

Pressure Range Elastomer seal: 10^{-7} mbar to 2.5 bar

Metal seal: 10^{-9} mbar to 2.5 bar

Dimensions

Stainless Steel 304/1.4301

SS304/1.4301: -196 to 300 °C

ISO-KF Claw (Wall) Clamp

- Suitable for use with elastomer seals
- For installing on a base plate with KF centering ring
- Aluminium body, stainless steel bolt.
- Cast steel
- Short and long versions available
- Spring loaded lock-washers, single Claw Clamp for bolting KF flanges to bulkheads
- Can be used instead of bulkhead clamps
- Wide range optimised for many applications
- Holes: Needed number of tapped holes in base plate: 4x90° (Thread: M6, depth: min. 6 mm)
- Material
Aluminium (EN AW-6082 T6)
Bolt: A2-70 stainless steel (Hexagon Head, M6 x 20 mm)
- Pressure Range
Elastomer seal: 10^{-7} mbar to 2.5 bar
Torque max 8 Nm

Dimensions

Aluminium EN AW-6082/3.2315

- Temperature Range: -196 to 200 C°

Size (DN)	A (mm)	B (mm)	C (mm)	D (mm)	E (mm)	Order No

ISO-KF Bulkhead Clamp

- For installing on a base plate with KF centering ring
- Holes: Needed number of tapped holes in base plate: 4x90° (Thread: M5, depth: min. 6 mm)
- Provides simple and secure baseplate connection
- Stainless Steel bolts and washers included
- Suitable for use with elastomer seals
- For mounting on a base plate with KF centered ring
- Material Aluminium (EN AW-6082 T6) Bolt: A2-70 stainless steel DIN933 (Hexagon Head, M5 x 20 mm, Silver Plated)
- Pressure Range Elastomer seal: 10^{-7} mbar to 2.5 bar

Dimensions

Aluminium EN AW-6082/3.2315

- Temperature Range: -196 to 150 °C

ISO-KF Chain Clamp

- Quick opening and closing of clamp
- Suitable for use with elastomer and metallic seals
- Hand grip: Stainless steel
- Especially for UHV applications
- Cryo applications
- Aluminium

Links constructed of pressure die-cast Aluminium alloy

Over pressure max.: 500 mbar

- Stainless Steel

Food and Beverage applications

Pressure range: $1 \cdot 10^{-11}$ hPa to 300 bar over pressure (metal seal)

Dimensions

Aluminium EN AC-4710

- Temperature Range: -196 to 200 °C

ISO-KF Flange with Pipe Thread Female and FKM Seal

- Material:

Stainless Steel 304/1.4301

Stainless Steel 316L/1.4404

Pressure range: $1 \cdot 10^{-8}$ mbar to 500 mbar

- O Ring Material: FKM

Temperature range: -15 to 150 °C (Consider O-ring temperature ranges.)

Dimensions

Stainless Steel 304/1.4301

- Temperature range: -196 to 300 °C

Size (DN)	A (mm)	B (mm)	L (mm)	Thread	Order No
10	15	10	35	G3/8	VA.05.06.02.004.001

ISO-KF PVC Hose with Embedded Spring

- Inner Tube: PVC, transparent
- Hose cover: PVC, transparent
- Casing: Steel coil
- Smooth inner and outer walls
- Custom lengths on request
- Pressure range: $1 \cdot 10^{-4}$ mbar to ambient pressure
- Temperature range: -5 to 40 °C
- Connection: with hose adapter and hose clamp

ISO-K / ISO-F SYSTEM

This part consists of ISO-K/ ISO-Systesm.
Check out this section for products NW 63 - 630

ISO-K & ISO-F Components

Anadolu Vacuum ISO Flange components are manufactured on the strength of DIN 28404 and ISO 1609. ISO flanges (also called Large ISO) have a sexless design and are made from stainless or Aluminium. All components produced by Anadolu Vacuum are 100% leak-tested and have leak rates better than 10^{-9} mbarl/s.

Standard sizes are NW 63 to 320. Nominal widths of up to 630 can be manufactured upon request. ISO-K clamping flange components are appropriate for building up high-vacuum connection from 10^{-9} mbar to 1.5 bar. Montage is via screw clamps, claws or a collar flange with snap ring and screws. The clamps, claws or screws must be fixed with so that the flanges butt against the centering ring. This requires a remarkable increment in torque. Sealing takes place according to the particular necessities via elastomer seals or an aluminium ring. In this case metal seals, the increased contact forces mean that accordingly more screw clamps are required. A collar flange supply a problem-free progress to ISO-F. The progress to KF components and also CF components is effectively conceivable using ISO-K/KF or ISO-K/CF adapter pieces.

Please consider the product information given on the product pages.

ISO-K / ISO-F Flanges

This part consists of ISO-K / ISO-F Flanges.
Check out this section for products NW 63 - 630

ISO-K Half Flange

- Pressure range: $1 \cdot 10^{-8}$ mbar to 1.5 bar (elastomer seal)
 $1 \cdot 10^{-9}$ mbar to 1.5 bar (metal seal)
- Custom lengths available upon request

Dimensions

Stainless Steel 304/1.4301

- Temperature range: -196 to 300 °C
- Material: Flange: stainless steel 304/1.4301; tube: stainless steel 304/1.4301 or better

ISO-F Measurement Flange

- Suitable for application with elastomer seal
- Pressure range: 1 · 10⁻⁸ mbar to 1.5 bar
- Materials:
Stainless Steel 304/1.4301
Stainless Steel 316L/1.4404
- Temperature range: Consider O-ring temperature ranges

Dimensions

Aluminium EN AW-6082/3.2315

- Temperature Range: -196 to 150 C°

Size (DN)	A (mm)	B (mm)	C (mm)	Order No
63	35	130	4 x M8	VC.01.05.01.010.001
100	35	165	8 x M8	VC.01.05.01.010.003

ISO-K Rotatable Bolt Ring

- Circlip included
- Fixation: Set of screws
- Materials:

Stainless Steel 304/1.4301

Stainless Steel 316L/1.4404

- With this product you can convert an ISO-K flange into a Rotatable ISO-F flange

Dimensions

Stainless Steel 304/1.4301

- Temperature range: -196 to 300 °C

ISO-K Seal Inner Centered With Mesh Screen

- Wire thickness: Approximately 0.3 mm
- Mesh: Approximately 1 mm
- Consider O-ring temperature ranges (See Properties of Elastomer Materials Table on Page 14)
- Various types of O-ring are available
- Seal Materials:
Aluminium EN AW-6082 T6
Stainless Steel 304/1.4301
Stainless Steel 316/1.4404

Dimensions

ISO-K Edge Seal Outer Centered

- No gas permeation
- Cryo, Radiation tolerant and nuclear application
- Clean room application compatible
- For stainless steel flanges
- Fastener: ISO-K Claw Clamp for Metal Seals
- For single use only
- Material: Aluminium EN AW-1050

ISO-K / ISO-F Clamps

This part consists of ISO K/F Clamps.
Check out this section for products NW 63 - 630

ISO-K Double Claw Clamp

- Suitable for use with elastomer seals
- Bolt: A2-70 stainless steel
- Do not use in turbo pump assembly
- Torque (max)
DN63-250: 16 Nm, DN320-630: 26 Nm
- Pressure Range: Elastomer seal: 10^{-7} mbar to 2.5 bar

Dimensions

Aluminium EN AW-6082/3.2315

- Temperature Range: -196 to 200 C°

Size (DN)	A (mm)	B	C (mm)	Order No
63-100	50	M8	24 mm- 27 mm	VB.03.01.01.010.001

ISO-K Claw Clamp

- Suitable for use with elastomer seals and metal seals
- Aluminum version: Suitable for use with elastomer seals
- For installing on a base plate with ISO-K centering ring
- Bolt: A2-70 stainless steel
- Do not use in turbo pump assembly
- Torque (max)
DN63-250: 16 Nm, DN320-630: 26 Nm
- Pressure Range: Elastomer seal: 10^{-7} mbar to 2.5 bar

ISO-F Screw Set

- Suitable for use with metal and elastomer seals
- Package include: One hexagon bolt, two washers and one nut
- These bolt packages fit ISO-F flanges for tapped ISO-F flanges: Include bolts and washers.

CF SYSTEM

This part consists of CF System.
Check out this section for products **NW16-NW350**

CF Components

Anadolu Vacuum CF components are manufactured according to ISO 3669. The CF flange (originally called ConFlat) is a sexless design where both flanges are identical. Typical flange materials are stainless steel types 304, 316L, 316LN ESR. All components are 100% leak-tested and have leak rates better than 10^{-10} mbarl/s. Standard sizes are NW 16 to 250. Other sizes can be produced on request. The ultra high vacuum range (UHV) assigns the pressure range $<10^{-8}$ mbar. To reach and keep up this low pressure range, a very low out-gassing rate is required in the vacuum system. Please consider the product information given on the product pages.

The CF components is sealed off by the cutting edge profile in the flange and a copper sealing washer. The copper sealing washer is embedded in the flange groove and, simultaneously, centres couple of flanges. While bolting the flanges, the cutting edges of the flanges for sealing are pressed deeply into the soft sealing washer, whereby the metal “flows away” radially and is pressed on the outside against the flange groove and limited. Even in the case of material deformation, this guarantees leak-tightness.

The flanges of the CF connections are designed according to ISO 3669. They are compatible with the Con-Flat flanges of other well-known brand. The standard material used is steels type 304. For the most widely recognized flanges and components, higher quality high-grade steels type 316L can also be used. The material number for the component can be found in the respective catalogue sections (“Components Elements Properties”). Because of the bake-out capacity necessary to UHV technology, sealing of the CF flanges is by means of a flat seal made of oxygen-free (OFHC) copper. The contact pressure is composed by diametrical tightening of the screws. The copper seal can only be used once. When baking out CF connections, ensure that heating up and cooling is achieved uniformly and sort of slowly.

CF Flanges

This part consists of CF Flanges.

Check out this section for products NW16-NW350

CF Half Flange

- Pressure range: $1 \cdot 10^{-12}$ mbar to ambient pressure
- Custom lengths available upon request
- Tube surface: Glass bead blasted (polished version on request)
- Tightness: $\leq 1 \cdot 10^{-10}$ mbar l/s
- Bake out range is up to 450°C

Dimensions

Stainless Steel 304/1.4301

- Temperature range: -196 to 300 °C
- Flange material: SS304 / 1.4301
- Tube material: SS304 / 1.4301

CF Blanking Flange

- Pressure range: $1 \cdot 10^{-12}$ mbar to ambient pressure
- Custom lengths available upon request
- Bake out range is up to 450°C
- Materials:

Stainless Steel 304/1.4301

Stainless Steel 316L/1.4404

Stainless Steel 316LN ESR/1.4429

Stainless Steel 316LN ESR/1.4429 ESU features

- Ideal for constantly dismantled chamber ports
- Electro-slag Remelt (ESR) to improve grain homogeneity and remove gross macro segregation
- Lower magnetic permeability for applications sensitive to magnetic materials ($\mu \leq 1.005$ vs. 1.03 for 304L SS)
- Low desorption
- Bakeable under vacuum up to 1050 °C
- Pressure range: $1 \cdot 10^{-13}$ mbar to ambient pressure

CF Blanking Flange, Rotatable

- Feature a rotatable flange
- Pressure range: $1 \cdot 10^{-12}$ mbar to ambient pressure
- Custom lengths available upon request
- Bake out range is up to 450°C
- Materials:

Stainless Steel 304/1.4301

Stainless Steel 316L/1.4404

Stainless Steel 316LN ESR/1.4429

Stainless Steel 316LN ESR/1.4429 ESU features

- Ideal for constantly dismantled chamber ports
- Electro-slag Remelt (ESR) to improve grain homogeneity and remove gross macro segregation
- Lower magnetic permeability for applications sensitive to magnetic materials ($\mu \leq 1.005$ vs. 1.03 for 304L SS)
- Low desorption
- Bakeable under vacuum up to 1050 °C
- Pressure range: $1 \cdot 10^{-13}$ mbar to ambient pressure

CF Weld Flange, Rotatable

- Feature a rotatable flange
- Pressure range: $1 \cdot 10^{-12}$ mbar to ambient pressure
- Custom lengths available upon request
- Bake out range is up to 450°C
- Materials:

Stainless Steel 304/1.4301

Stainless Steel 316L/1.4404

Stainless Steel 316LN ESR/1.4429

Stainless Steel 316LN ESR/1.4429 ESU features

- Ideal for constantly dismantled chamber ports
- Electro-slag Remelt (ESR) to improve grain homogeneity and remove gross macro segregation
- Lower magnetic permeability for applications sensitive to magnetic materials ($\mu \leq 1.005$ vs. 1.03 for 304L SS)
- Low desorption
- Bakeable under vacuum up to 1050 °C
- Pressure range: $1 \cdot 10^{-13}$ mbar to ambient pressure

Dimensions

Stainless Steel 304/1.4301

- Temperature range: -196 to 300 °C

CF Seals

This part consists of CF Seals.

Check out this section for products NW16-NW350

CF Elastomer Gasket

- With a flat cross-section
- Convenient and reusable in non-critical, non-UHV applications
- Especially in applications requiring recurrent reassembly
- Temperature range: -15 to 150 °C
- Pressure range: $1 \cdot 10^{-8}$ hPa to ambient pressure

Dimensions

FKM

- Temperature range: -15 to 200 °C

Size (DN)	A (mm)	B (mm)	C (mm)	Order No

250	272.9	254	3	VD.02.01.13.001.007

CF Metal Gasket

- Especially well-suited for viewports
- For single use only
- Pressure range: $1 \cdot 10^{-13}$ mbar to ambient pressure
- Materials

OFHC Copper (Oxygen-free copper Alloy 101/C10100)

Silver-Plated OFHC Copper

Dimensions

OFHC Copper (Oxygen-free)

- Temperature range: -196 to 200 °C

CF Fittings

This part consists of CF Fittings.
Check out this section for products NW16-NW350

CF Straight Reducer

- Feature a rotatable flange (reduced flange)
- Other nominal diamters and dimensions on request
- Pressure range: $1 \cdot 10^{-12}$ mbar to ambient pressure
- Custom lengths available upon request
- Tube surface: Glass bead blasted (polished version on request)
- Tightness: $\leq 1 \cdot 10^{-10}$ mbar l/s
- Bake out range is up to 450°C

Dimensions

Stainless Steel 304/1.4301

- Temperature range: -196 to 300 °C
- Flange material: SS304 / 1.4301
- Tube material: SS304 / 1.4301

Product List

Vacuum Components

ISO-KF

ISO-K/ISO-F

CF SYSTEMS

ISO-KF System

ISO-KF Short Half Flange.....	19
ISO-KF Long Half Flange.....	21
ISO-KF Full Flange.....	23
ISO-KF Blanking Flange	24
ISO-KF Weld Ring Flange.....	25
ISO-KF Flange Caps (Plastics).....	26
ISO-KF Seals Outer Centered	28
ISO-KF Seal Inner Centered	30
ISO-KF Seal Reducer Inner Centering.....	34
ISO-KF Seal Inner Centered with Mesh Screen.....	36
ISO-KF Seal Inner Centered With Sintered Metal Filter	38
ISO-KF Alu Edge Seal Outer Centered	40
ISO-KF Alu Edge Seal One-Side Outer Centered	41
ISO-KF Copper Edge Seal Outer Centere	42
ISO-KF Copper Edge Seal One-Side Outer Centered	43
ISO-KF Alu Edge Seal Inner Centered.....	44
ISO-KF Alu Edge Seal One-Side Inner Centered.....	45
ISO-KF Copper Edge Seal Inner Centered.....	46
ISO-KF Copper Edge Seal One-Side Inner Centered.....	47
ISO-KF Seal Outer Centering Without Support	48
ISO-KF Outer Centering Outer Ring.....	50
ISO-KF Inner Centered Inner Ring.....	51
ISO-KF O-ring.....	52
ISO-KF Wingnut CNC Machined Clamp.....	55
ISO-KF Wingnut Casting AL Clamp.....	57
ISO-KF Wingnut Casting SS Clamp	58
ISO-KF Claw (Wall) Clamp	59
ISO-KF Bulkhead Clamp	60
ISO-KF Chain Clamp.....	61
ISO-KF Bolt Clamp (2-Part).....	62
ISO-KF Straight Reducer	64

ISO-KF Conical Reducer.....	67
ISO-KF Tee	68
ISO-KF Tee (Forging)	69
ISO-KF Reducer Tee.....	70
ISO-KF 90 Radius Elbow	71
ISO-KF 45 Radius Elbow.....	72
ISO-KF 90 Elbow (Forging).....	73
ISO KF 4 Way Cross	74
ISO KF 4 Way Cross (Forging).....	75
ISO-KF Reducer Cross	76
ISO KF Hose Nozzle.....	78
ISO-KF Adapter for Pvc Hose.....	80
ISO-KF Flange With Pipe Thread Male.....	82
ISO-KF Flange with Pipe Thread Male and FKM Seal	83
ISO-KF Flange With Pipe Thread Female.....	84
ISO-KF Flange with Pipe Thread Female and FKM Seal	85
ISO-KF Flange With NPT Thread Male	86
ISO-KF Flange With NPT Thread Female.....	87
ISO-KF 90 Elbow with Hose Adapter	88
ISO-KF to CF Adapter.....	89
ISO-KF Flexible Hose.....	91
ISO-KF Flexible Hose Thin Wall.....	93
ISO-KF Flexible Hose, Sheathed	95
ISO-KF PVC Hose and Flanges.....	97
ISO-KF PVC Hose with Embedded Spring.....	98

ISO-K / ISO-F System

ISO-K Half Flange.....	102
ISO-K Full Flange.....	104
ISO-K Blanking Flange	105
ISO-F Blanking Flange.....	106
ISO-K Weld Ring Flange.....	107
ISO-F Weld Ring Flange	109

ISO-F Measurement Flange	110
ISO-K Rotatable Bolt Ring.....	111
ISO-K to ISO-F Adapter Flange.....	112
ISO-K Flange Caps.....	113
ISO-K Seal Inner Centered	115
ISO-K Seal Inner Centered With Support.....	118
ISO-K Seal Inner Centered With Mesh Screen.....	121
ISO-K Edge Seal Outer Centered.....	123
ISO-K Copper Edge Seal Outer Centered	124
ISO-K/F O-ring.....	125
ISO-K Double Claw Clamp	128
ISO-K Claw Clamp.....	129
ISO-F Screw Set	130
ISO-K Straight Reducer.....	132
ISO-K Conical Reducer	133
ISO-K Tee.....	134
ISO-K Reducer Tee.....	135
ISO-K to KF Reducer Tee.....	136
ISO-K Elbow Radius 90.....	137
ISO-K Elbow 90	138
ISO-K 4 Way Cross.....	139
ISO-K Reducer Cross.....	140
ISO-K to KF Adapter Cross	141
ISO-K Flange With Pipe Thread and FKM Seal, Male.....	143
ISO-K Hose Adapter	144
ISO-K Sleeve Adapter	145
ISO-K to KF Straight Adapter	146
ISO-K to KF Conical Adapter.....	147
ISO-K to CF Adapter	148
ISO-K Flexible Hose.....	150
ISO-K Flexible Hose, Annealed.....	151
ISO-K PVC Hose and Flanges.....	152
ISO-K PVC Hose With Embedded Spring.....	153

CF System

CF Half Flange.....	157
CF Half Flange with Thread	159
CF Half Flange, Rotatable	160
CF Half Flange, Rotatable with Thread.....	162
CF Full Flange.....	163
CF Blanking Flange	164
CF Blanking Flange with Thread.....	166
CF Blanking Flange, Rotatable.....	168
CF Weld Flange.....	170
CF Weld Flange with Thread.....	173
CF Weld Flange, Rotatable	175
CF Spacer Flange.....	178
CF Spacer Flange with Bore Holes.....	179
CF Reducer Flange	180
CF Flange Caps.....	182
CF Elastomer Gasket	184
CF Metal Gasket	185
CF Straight Reducer	187
CF Tee	188
CF Reducer Tee.....	189
CF Elbow, 90	190
CF 4 Way Cross	191
CF 4 Way Reducer Cross.....	192
CF 5 Way Cross	193
CF 6 Way Cross.....	194
CF Flexible Hose.....	196
